-

Projects

Phone Number Validator

- **Situation:** During my Python course, I wanted to create a useful project to show my coding and database skills.
- **Task:** To build a phone number validator that uses real-time data.
- **Action:** I developed it fully in Python, connected the Numverify API, added validation logic, and stored results in a database.
- **Result:** The project worked perfectly and helped me improve my coding, API integration, and problem-solving skills.

AWS Cloud Architecture Design for an E-Commerce Web Application

- **Situation:** While learning AWS Cloud Computing, I wanted to design a real-world project to understand scalable and secure cloud architecture.
- **Task:** To build a complete AWS-based solution for hosting an e-commerce web app with high availability and optimized performance.
- **Action:** Designed a three-tier architecture using **EC2, RDS, S3, CloudFront, Route 53, IAM**, and **CloudWatch**, applying AWS best practices for scalability, security, and cost optimization.

- **Result:** Successfully delivered a **fully functional, secure, and cost-efficient cloud architecture**, enhancing my practical knowledge of **AWS services and deployment management**.
